

EA LIFT™

The PLS EA Lift™ now features a range of innovative upgrades that enhance its usability, installation process, maintenance and provide weight saving benefits. One major change is the addition of a punched steel mesh platform surface. This innovation not only reduces the overall weight of the lift but also preserves its remarkable robustness and load-bearing capacity. This surface is incredibly sturdy and also remarkably easy to clean, ensuring a high-traction, dependable platform.

Another key enhancement is the redesign of the outer barrier mechanism, incorporating longer and wider levers in place of the previous large rollers. These upgraded levers bring increased dependability and stability to the mechanism, ensuring a secure lock on the outer barrier when the lift is raised. This guarantees a smooth barrier opening, regardless of the ground conditions you may encounter.

To further enhance overall performance and comfort, we have added rigidity braces beneath the platform. These components work tirelessly to maintain the platform's shape, even when dealing with changing load conditions. This ensures a stable and secure lifting experience that you can rely on.

These are just a few of the remarkable improvements that have been made to the PLS EA Lift™, showcasing our commitment to
