

## Easy Access

The PLS Easy Access Lift is the UK's number one heavy-duty inboard passenger lift and is widely used by the patient transfer service, welfare and SEN sectors as it is safe, robust, and powerful.

Flexibility is a key feature of the PLS Easy Access Lift. With the longest platform available on the market today, it has been innovatively engineered with an impressive 400kg Safe Working Load (500Kgs upgrade available on all PLS lifts) and folds to a vertical position within the rear or side of a vehicle when stowed.

As the name suggests, Easy Access has been designed to make boarding the vehicle a breeze and is the only model that will accommodate the latest large bariatric stretchers. The extra wide version even provides ample room on the platform for operator and patient or oversized wheelchairs.

Easy Access is constructed with stainless steel giving it structural integrity, corrosion resistance and highly desirable mechanical properties.

Our automatic dual handrail system is constructed from high-tensile thick wall steel and then powder coated and rubber dipped to add a strong and durable finish. Measuring 760mm long with an impressive 300mm of high flat hand-holding (the Bariatric handrail are 420mm) the handrails ensure safety and assistance when using the lift.

## Benefits

- Strong, durable and safe for high traffic PTS and wheelchair use
- Increased care as space for attendant to travel simultaneously
- Stainless steel components for longevity
- Simple and easy service procedures to minimise downtime
- Long and secure locking handrails
- Split or solid options with mesh or aluminium plate platform surface
- Self-levelling barriers even on uneven terrain
- Capable of lifting up to 500Kg
- Secondary down-valve to eliminate lift creep in storage

## Options

- Upgraded lifting capacity
- Service cycle counter
- Flashing or static lighting
- Increased anticorrosion kit
- Audible warning kit
- Wireless remote controller
- Fully stowed signal switch
- Infrared threshold beam warning
- DoorSafe compatible

## Technical

- Lifting height of up to 1150mm
- Double locked down valve
- IVA fast emergency override
- Widths of up to 915mm
- Lengths of up to 2000mm
- Solid or Split platform designs
- Mesh surface or alloy plated
- Side or rear installations
- Simple 3-Button controller
- Manual backup pump included

## Safety compliance

- SWL and CE Certificates
- LOLER Installation Compliance
- Fully PSVAR, DDA, COIF, BS6109, EEC2001/85 and IVA2009
- Meets ECWVTA (European Whole Vehicle Type Approval)
- ISO accredited production
