SAFETY AWARENESS GUIDE

The Safest Lift Just Got Safer

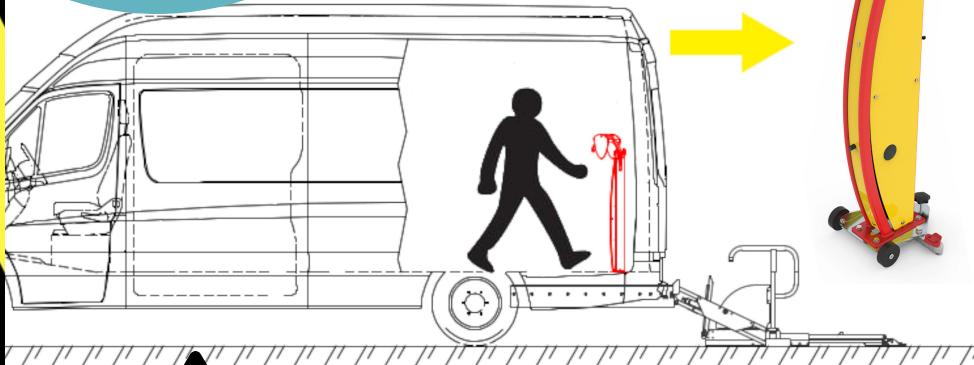

Introducing Passenger Lift Solutions
Extensive Range of Operating Safety
Products

DoorSafe

DoorSafe prevents your passenger or driver from falling through the open door aperture when the lift is deployed to ground.

A fully automatic barrier raises when the lift begins to lower, which effectively prevents passengers or drivers from accidentally falling out the rear doors while the lift is in motion.

- Smooth electric operation
- Simple manual override
- 12v or 24v versions
- High contrast/visibility colours
- Simple retrofit to older vehicles

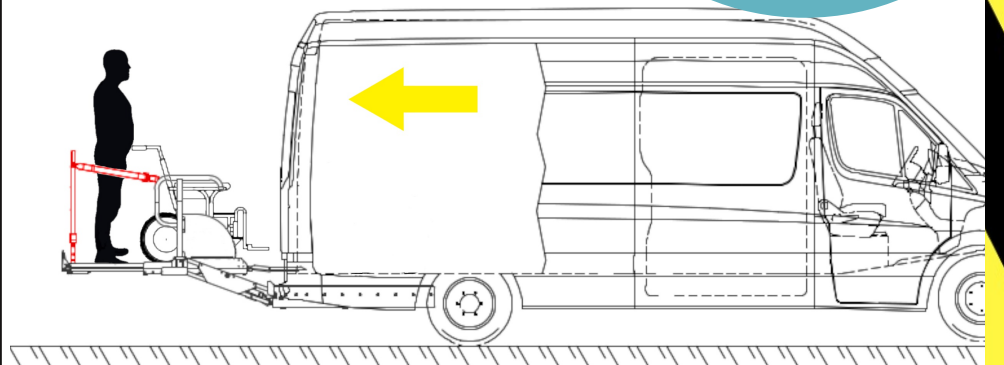

StopSafe

StopSafe provides a large strong barrier at the end of the platform, extending with belts to the handrails to create a zone of safety when the platform is raised.

For added safety, a high-strength manually operated barrier can be installed at the end of the platform. This barrier effectively safeguards both passengers and drivers against accidental falls over the platform's edge.

- Manual operation
- Retrofittable in just one hour
- Retractable belts to provide side protection
- Rubber coated for increased grip and comfort

It's not an accident if you can prevent it!
